A detailed search within 25 nautical miles (nm) of Wu-Han (Figure 2) was conducted on recent, good-quality photography, and no facility or activity was observed which had any apparent or suggested guided missile significance. However, the following items of intelligence interest were noted.  1. Han-Kou Explosives Storage Depot (30-42N 114-14E) - A secured explosives storage depot has been constructed on the side of a small hill approximately 7 mm north-northeast of the city of Han-Kou since This installation is served by an improved road and contains ten heavily revetted storage buildings and two unidentified structures. It is secured by a single wall which has been added since Figure 3).  2. Han-Kou Military Storage/Barracks Area (30-44N 114-21E) - A secured installation is located approximately 10 mm north of Han-Kou and 0.5 nm southeast of the Wu-Han POL storage. It is served by road and a 0.25 nm rail spur and consists of two separately secured areas containing nin and thirteen storage/barracks buildings respectively. Guard towers are present on the wall which secures each of these areas. A large administration support area is also included within the main wall which secures the entire installation. A small arms firing range is located approximately 0.5 nm west of the installation and is connected to it by road (Figure 4).  3. Chih-Fang Arsenal (30-21N 114-16E) - New construction has been observed at the Chih-Fang arsenal since It consists of a road leading from a large building (function unknown) to a cleared area just inside the security fence and approximately 500 feet from the building. The cleared area contains two unidentified objects and its function is undetermined (Figure 5).		CIĄ IMAGERY ANALYSIS DIVISION	N	CIA/PIR-61081
